

S-54

DRINKING WATER SYSTEM
with lead reduction capabilities

PEACE OF MIND...RIGHT FROM THE TAP!

The Everpure S-54 Drinking Water System is the practical, low-cost solution for filtering out lead, disinfectant chlorine, dirt, rust, asbestos fibers, microscopic protozoan cysts, and other particles from drinking water, including oxidized iron, manganese and sulfides.

Part No. EV9720-06

THE PRACTICAL SOLUTION

Reduces lead to below the Federal Action Level of 15 ppb, takes out asbestos fibers, parasitic protozoan cysts, and other microscopic particles that may be in the water supply.

THE QUALITY SOLUTION

Taste the difference. Everything made with water will taste better. Finely polishes water to premium quality for drinking and cooking. Water leaving the faucet is sparkling, brilliant and free of unwanted tastes and odors.

THE LOW-COST SOLUTION

Far less expensive than bottled water, distillation or reverse osmosis systems. Costs only pennies per gallon. The system provides about a year's supply of drinking water, so there's no need to ration as with bottled water or R.O. systems.*

THE CONVENIENT SOLUTION

Hides under the sink, installs in minutes with ordinary tools and no pipe cutting. Separate faucet recommended for selective usage of filtered water, extending cartridge life. Cartridge replacement is as easy as changing a light bulb.

The Everpure S-54 Drinking Water System reduces or removes the following contaminants:**

- ✓Lead
- ✓Bad tastes and odors
- ✓Chlorine
- ✓Dirt and cloudiness
- ✓Giardia lamblia cysts
- ✓Entamoeba histilytica cysts
- ✓Cryptosporidium parvum cysts
- ✓Mold and algae
- ✓Oxidized sulfides
- ✓Oxidized iron
- ✓Oxidized manganese
- ✓99.9% + of all particles 1/2 micron and larger in size

*Under normal water conditions and family usage.

**See Performance Data Sheet for specific contaminant removal data.

S-54

DRINKING WATER SYSTEM
with lead reduction capabilities

COSTS FAR LESS TO INSTALL AND OPERATE The S-54 costs far less to install and operate than bottled water, or other more complicated water treatment processes.

LEAD REDUCTION The S-54 reduces up to 99% of lead in drinking water—well below the Federal Action Level of 15 ppb.

40 TIMES GREATER FILTRATION The S-54 provides up to 40 times finer filtration than any other home unit. Special pre-coat design increases sediment removal efficiency along with improved taste and odor control.

EASY INSTALLATION AND QUICK CARTRIDGE CHANGE The S-54 installs easily in less than one hour, using common household tools. Cartridge change takes less than a minute.

The S-54 has more filter area than ordinary home units of similar size, for more consistent performance and longer life.

Exclusive Micro-Pure® filtering material coats entire pleated surface inside cartridge—eliminates over 99.9%+ of all particles 1/2 micron (1/50,000 inch) and larger for the entire rated life of the cartridge.

Pleated surface increases water's exposure to activated carbon for longer cartridge life and improved efficiency.

Easy-change disposable cartridge has metal walls to resist water pressure surges which are known to crack or split some plastic filter housings.

THE COMPANY Everpure is headquartered in Hanover Park, IL, a suburb of Chicago, with manufacturing and sales facilities worldwide. Since 1933, Everpure has been providing innovative and effective water treatment solutions and water management to the foodservice, COW and residential markets, ensuring the best quality water anywhere. Lead Reduction

Mechanical Filtration Unit

Cyst Reduction

The S-54 Drinking Water System has been tested and listed by NSF only for the functions listed above. Check for compliance with state and local laws and regulations. Do not use where the water is microbiologically unsafe or with water of unknown quality without adequate disinfection before or after the unit; unit may be used on disinfected waters that may contain filterable cysts.

This drinking water system must be maintained according to the manufacturer's instructions, including replacement of filter cartridges.

The substances reduced or removed by this system are not necessarily in your water, but it is comforting to know that the right Everpure Drinking Water System can handle most any problem. Read the performance data sheet for more information.

Flow Rate:

Controlled at 0.5 gal/min
(1.9 L/min)

Temperature:

Cold water supply only,
Max. 100° F (38° C)

Pressure:

10-125 psi (0.7-8.6 bar)
Non-shock

Capacity:

750 gal (2835 L)

Everpure Warranty:

Everpure Drinking Water Systems are warranted to be free of defects for a full twelve (12) months after purchase. A detailed warranty statement is provided with each system.
